

Write a JavaScript function to get humanized number with the correct suffix such as 1st, 2nd, 3rd or 4th

Program :

```
<html>
  <body>
    <script>
      function a()
      {
        var number=prompt("Enter Number :");

        if(number % 100 >= 11 && number % 100 <= 13)
          alert(number + "th") ;
        else{
          switch(number % 10)
          {
            case 1: alert(number + "st") ;
                     break;
            case 2: alert(number + "nd") ;
                     break;
            case 3: alert(number + "rd") ;
                     break;
          }
        }

        a();
      }
    </script>
  </body>
</html>
```

Output :

This page says

Enter Number :

OK Cancel

This page says

21st

OK

This page says

Enter Number :

OK Cancel

This page says

12th

OK
